

Business Problem Summary

An online bookstore needs a database to manage its inventory, customer base, and orders. The main business goals are:

- To store and manage book details, including title, author, genre, published year, price, and stock.
- To track customers, including their contact and location information.
- To record sales orders, linking customers to books purchased, tracking quantities and total transaction amounts.
- To enable analysis of book sales, such as:
 - Listing books by genre (e.g., Fiction).
 - Filtering books by publication date.
 - Generating insights on stock availability and popular items.

This SQL script is building the foundation for:

- Operational efficiency (managing stock and customers),
- Sales insights, and
- Customer behavior analysis.
